

RENEW SAFETY

POWER PRODUCTION - CONSTRUCTION - INDUSTRIAL

Scissor Lift / MEWP Operator Training

Participants learn how mobile elevating work platforms (MEWPs), including scissor lifts, are used to safely raise workers to elevated work areas during construction, maintenance, and industrial operations.

WWW.RENEWSAFETY.COM

OUR COURSE OVERVIEW

This comprehensive course provides essential training for workers responsible for operating scissor lifts and mobile elevating work platforms during elevated work activities.

Participants learn how scissor lifts present hazards such as falls, tip-overs, crushing hazards, and contact with overhead obstacles when equipment is not operated according to safe work practices.

Safety training is most effective when workers understand both equipment hazards and the procedures used to control them. This course combines operational knowledge with practical workplace guidance to help organizations maintain safe conditions when using mobile elevating work platforms.

The course explains safe operating procedures including equipment inspections, platform positioning, load limits, guardrail protection, and hazard recognition when working on elevated platforms.

Through practical instruction and workplace safety guidance, participants gain the knowledge required to safely operate MEWPs and recognize hazards that can occur when using scissor lifts on active job sites.

KEY LEARNING OBJECTIVES

What You Will Learn

- Identify common hazards associated with scissor lifts and mobile elevating work platforms.
- Recognize components and safety features of MEWP equipment.
- Understand the safe operating procedures for elevating and positioning work platforms.
- Identify conditions that may cause tip-overs or equipment instability.
- Identify worker responsibilities when operating mobile elevated work platforms.
- Recognize fall protection and the guardrail requirements when working on lifts.
- Understand proper inspection procedures before operating scissor lifts.

Together, these key learning objectives help participants recognize MEWP hazards and apply procedures that support safe elevated work platform operations.

MEWP Hazard Awareness

Participants learn how scissor lifts and mobile elevating work platforms can create hazards such as falls, tip-overs, crushing hazards, and contact with overhead objects when equipment is improperly positioned or operated.

Safe Operation of Scissor Lifts and MEWPs

The course explains the safe practices required when operating scissor lifts, including maintaining stable positioning, staying within load limits, and ensuring proper guardrail protection while working on elevated platforms.

COURSE DETAILS

Prerequisites

No prior MEWP operator training is required for this course. Participants should have a basic understanding of workplace safety practices and construction or maintenance tasks performed at elevated work locations.

Certification

Upon successful completion, participants receive a certificate of completion demonstrating training in scissor lift and mobile elevating work platform safety awareness.

Compliance

This course aligns with OSHA requirements related to scissor lift safety, operator training, fall protection practices, and safe operation of mobile elevating work platforms.

Target Audience

This course is intended for construction workers, maintenance personnel, technicians, supervisors, and employees who operate or work around scissor lifts and mobile elevating work platforms during elevated work activities on construction or industrial job sites.

Course Code:	N/A
Format:	N/A
Duration:	N/A

WHY TAKE THIS COURSE?

The Importance of MEWP Operator Training

- Falls, tip-overs, and crushing hazards can occur when scissor lifts are used improperly on job sites.
- Workers must be able to understand equipment limitations and safe operating procedures before using mobile elevating work platforms.
- Proper MEWP training helps prevent falls, equipment instability, and workplace injuries during elevated work activities.

Proper MEWP operator training helps workers recognize equipment hazards and apply procedures that reduce accidents when operating scissor lifts.

Preparing Teams for Elevated Work Platform Safety

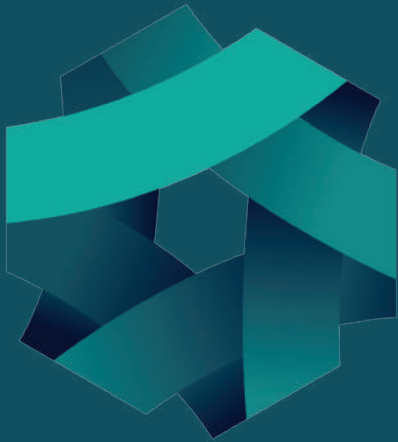

This course provides practical training that helps workers understand scissor lift hazards, safe operating procedures, and responsibilities when working on elevated work platforms.

Training improves preparedness by ensuring workers understand equipment hazards, safe positioning practices, and workplace responsibilities when operating MEWPs.

Supporting Safety Compliance

MEWP operator training helps organizations meet OSHA safety requirements related to elevated work platforms and fall protection practices. Employers must ensure workers understand safe operating procedures, hazard recognition, and inspection practices before operating scissor lifts.
