

RENEW SAFETY

POWER PRODUCTION - CONSTRUCTION - INDUSTRIAL

Slips, Trips & Falls Training

Participants learn how slips, trips, and falls occur in construction and industrial environments and how unsafe walking conditions, poor housekeeping, and human factors can create serious workplace hazards.

WWW.RENEWSAFETY.COM

OUR COURSE OVERVIEW

This comprehensive course provides essential training for workers who perform tasks in environments where slips, trips, and falls may occur during construction or maintenance.

Participants learn how walking surfaces, environmental conditions, and unsafe work practices can create slip and trip hazards if they are not properly identified and managed according to safe work procedures.

Safety training is most effective when workers understand both the hazards that cause slips and trips and the procedures used to control them. This course combines hazard awareness with practical workplace guidance to help organizations maintain safe walking and working conditions.

The course explains the procedures required to prevent slips, trips, and falls, including recognizing common hazards such as wet surfaces, obstructed walkways, uneven flooring, and poor lighting conditions.

Through practical instruction and workplace safety guidance, participants gain the knowledge required to recognize slip and trip hazards and apply procedures that support safer movement on active job sites.

KEY LEARNING OBJECTIVES

What You Will Learn

- Identify common slip, trip, and fall hazards including wet surfaces and obstacles.
- Recognize workplace conditions that increase slip and trip risks.
- Understand safe walking practices used to reduce workplace injury risks.
- Identify different unsafe walking surfaces and environmental hazards.
- Understand the worker responsibilities for maintaining safe walking areas
- Recognize proper housekeeping practices that reduce slip and trip hazards.
- Understand procedures used to prevent slips, trips, and falls.

Together, these key learning objectives help participants recognize slip and trip hazards and apply procedures that support safer workplace movement and hazard awareness.

Slip, Trip and Fall Hazard Awareness

Participants learn how walking surfaces, cluttered work areas, wet conditions, and environmental hazards can create slip, trip, and fall risks when workers move through active work environments. Training focuses on recognizing hazards and identifying unsafe walking conditions.

Safe Walking Practices and Worker Responsibilities

The course explains the safe work practices required when moving through work areas, including recognizing hazards, maintaining clear walkways, and following safe movement procedures that help reduce slip, trip, and fall incidents.

COURSE DETAILS

Prerequisites

No prior slips, trips, and falls training is required for this course. Participants should have a basic understanding of workplace safety practices and common construction or maintenance activities where walking hazards may exist.

Certification

Upon successful completion, participants receive a certificate of completion demonstrating training in slip, trip, and fall hazard awareness and prevention practices.

Compliance

This course aligns with OSHA safety requirements related to workplace hazard awareness, safe walking surfaces, and worker responsibilities for maintaining safe working conditions.

Target Audience

This course is intended for construction workers, maintenance personnel, supervisors, and employees who work in environments where walking surfaces, environmental conditions, or worksite hazards may increase the risk of slips, trips, and falls.

Course Code:	N/A
Format:	N/A
Duration:	N/A

WHY TAKE THIS COURSE?

The Importance of Slips, Trips and Falls Safety Training

- Slips, trips, and falls remain one of the most common causes of workplace injuries in construction and industrial environments.
- Workers must recognize unsafe walking conditions such as wet surfaces, cluttered pathways, and uneven flooring.
- Proper safety practices help reduce hazards related to walking surfaces, obstacles, and environmental conditions.

Proper slips, trips, and falls training helps workers recognize hazards and apply procedures that reduce accidents during routine workplace movement.

Preparing Teams for Slip and Trip Hazard Awareness

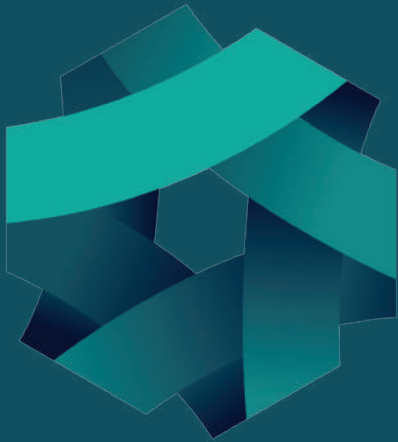

This course provides practical training that helps workers understand slip and trip hazards, safe walking practices, and workplace responsibilities when moving through active work environments.

Training improves preparedness by ensuring workers understand hazard awareness, safe movement procedures, and responsibilities when working around potential slip and trip hazards.

Supporting Safety Compliance

Slip, trip, and fall safety training helps organizations meet OSHA safety requirements related to workplace hazard awareness and walking surface safety. Employers must ensure workers understand slip and trip hazards and the procedures required to maintain safe working conditions.
